# 1. Introduction

## 1.1 Overview

The Transportation Consultancy Ltd ('ttc') has been appointed by WEPCo Limited to provide traffic and transport consultancy services with regards to a planning application for the development of a new Creative Arts Hub and Vocational Skills Hub at the Coleg Sir Gar Pibwrlwyd Campus that will provide a combined Gross Internal Floor Area of 14,857sqm (herein referred to as "the Campus"). The Site location is shown at **Figure 1.1** below.

**Figure 1.1 Site Location in Strategic Context**

The Campus is located on the northern and southern side of Pibwrlwyd Lane and to the east of the A484, approximately 2km south of Camarthen and the Railway Station. There are bus stops located close to the College on the A484, north of the roundabout, providing access to bus services 195, 197, 198, B13 and X11 Cymru Clipper. The application refers to just the area to the north of Pibwrlwyd Lane (the MIM area).

## 1.2 Site Allocation

In the adopted Development Plan, the site is part of the defined development limits boundary and included in the Pibwrlwyd strategic Mixed-use allocation, including education use associated with Coleg Sir Gar, residential use, employment uses, and commercial leisure use. The Development Plan's proposals map shows the

strategic site identified via the policy annotation GA1/MU2. There are no mapped constraints for the development site.

The Revised Local Development Plan (2018-2033) although not yet adopted, has significant material weight when determining development applications, along with the adopted Local Development Plan, due to it being in the latter stages of preparation and examination. In the Revised Development Plan the site is again part of the defined development limits boundary and included in the Pibwrlwyd strategic mixed-use allocation, including education use associated with Coleg Sir Gar, residential use, employment use, and commercial leisure use.

The site has a defined residential allocation of approximately 247 new homes under policy PrC1/MU2. Once again there are no mapped constraints for the development site. Aside from the expansion of the College, the rest of the allocated land has been preliminarily assessed by Asbri Transport as part of the Candidate Site submission for the Local Plan. This work was undertaken in May 2023 and, where appropriate, we have drawn on this work.

### 1.3 Existing College

The existing Pibwrlwyd Campus is home to a wide range of curricula that spans further and higher education. This includes Art and Design, Animal Science, Automotive Engineering, Business and Management, Catering and Hospitality, Equine Studies, Leisure and Tourism, Teacher Training and Veterinary Nursing. The land around the Campus is considered to have a rural setting albeit it is located a short distance from Camarthen town centre.

### 1.4 Proposals

The overarching development proposal will result in the creation of a new Creative Arts Hub catering for an additional 700 students and the new Vocational Skills Hub catering for an additional 1,685 students (all FTE), with a mix of full and part-time delivery including evenings and weekends.

The new College will bring together all Campus locations including Pibwrlwyd, Ammanford and Jobs Well.

A proposed Masterplan is provided in **Appendix A**.

### 1.5 Pre-Application Consultation / Discussions

In developing the proposals, regular meetings were held with CCC Highways in order to keep them informed about the evolution of the design as well take on board any relevant comments. As well as this, we obtained a number of formal pre-application responses, all of which are on record and have been reflected in the design.

At this moment in time, for the PAC process, although the plans are considered frozen at this stage, there will be additional design changes made for the full submission in order to refine the plans further and to take into account any further comments from the Council.

### 1.6 Structure of Report

This report considers the effect of development in transport terms including active travel, car parking, cycle parking, access, trip generation, highways impact, servicing and deliveries as well as proposing improvements, where deemed necessary / appropriate.

The remainder of the report is structured as follows:

- **Section 2** sets out the existing situation as well as the accessibility of the College by non-car modes of transport; including an assessment of highway safety;
- **Section 3** sets out the relevant planning policy;
- **Section 4** sets out the development proposals in detail;
- **Section 5** sets out the trip generation and the potential highway effects of the development;
- **Section 5** sets out the potential highways impact of development;
- **Section 6** provides an indicative TIS that will be developed further for the planning application; and,
- **Section 7** provides a summary and conclusion.

## 2. Existing Situation

### 2.1 Overview

This section of the TA outlines the existing conditions, existing access arrangements, sustainable transport links and local highway network. A review of personal injury accident data is also provided. The content of the section has been collated to supplement the criteria of the Active Travel Act Guidance which is applicable in Wales.

### 2.2 Site Location and Surrounding Area

The existing Pibwrlwyd Campus is home to a wide range of curricula that span further and higher education. This includes Art and Design, Animal Science, Automotive Engineering, Business and Management, Catering and Hospitality, Equine Studies, Leisure and Tourism, Teacher Training and Veterinary Nursing. The land around the Campus has a rural setting albeit is located a short distance from Carmarthen town centre. An existing site layout drawing is shown in **Figure 2.1**.

In total, the following staff and pupil numbers are currently accommodated across all Campus locations; this is based on the data we have received from the College:

- Jobs Well Campus - 412 learners and 62 staff;
- Ammanford Campus - 1,471 learners and 92 staff;
- Pibwrlwyd Campus - 1,459 learners and 117 staff; and,
- TOTAL - 3,342 learners and 271 staff (3,613 total).

Figure 2.1 Existing College Layout

## 2.3 Existing College Access

The existing Pibwrlwyd Campus is currently served by three vehicle access points including one directly east of the roundabout with the A484 serving the northern buildings and main car park, a central access serving the northern and southern buildings and an eastern access serving the southern buildings only.

There is also an existing access to a southern overspill parking area which is opposite the existing access to the northern buildings, off Pibwrlwyd Lane.

Access by foot can be taken from all existing access points along Pibwrlwyd Lane albeit some routes are not clearly marked and likely to be used / operate as shared space. The College would therefore benefit from improvements to the public realm along Pibwrlwyd Lane, that will be set out in this Report.

## 2.4 Traffic Surveys

Traffic surveys were undertaken by Asbri Transport in March 2023 for the wider allocation, which included those shown in **Figure 2.2** where there were 2 x ATC's and 3 x JTC's. Given that these surveys are less than 3 years old, it is considered acceptable to use this traffic survey data for assessments within this Transport Assessment.

**Figure 2.2** Asbri Traffic Count Locations

In addition to the above, ttc also commissioned the following surveys to supplement this information:

- In / Counts JTC's at the College access points to assist with current traffic flows and parking accumulation (Wednesday 19<sup>th</sup> June 2024); and
- ATC between location 2 and 3 on the above plan to assist with the positioning of a construction access on the A484 (July 2025 – 1-week).

A summary of information is provided in **Table 2.1** below. It is pertinent to note that the in / out counts have been factored based on a spot count of the car park during a busy period, to ensure that any reductions due to the term coming to an end have been factored based on a spot count.

**Table 2.2 JTC In / Out Calculations**

| Time Period   | Main College Car Park Flows IN | Main College Car Park Flows OUT | 1-hour Parking Accumulation |          |
|---------------|--------------------------------|---------------------------------|-----------------------------|----------|
|               |                                |                                 | Survey                      | Factored |
| 07:00 - 08:00 | 7                              | 4                               | 5                           | 7        |
| 08:00 – 09:00 | 35                             | 9                               | 33                          | 44       |
| 09:00 – 10:00 | 45                             | 10                              | 68                          | 90       |
| 10:00 – 11:00 | 6                              | 4                               | 70                          | 93       |
| 11:00 – 12:00 | 4                              | 10                              | 64                          | 85       |
| 12:00 – 13:00 | 8                              | 25                              | 47                          | 63       |
| 13:00 – 14:00 | 17                             | 8                               | 56                          | 74       |
| 14:00 – 15:00 | 8                              | 14                              | 48                          | 73       |
| 15:00 – 16:00 | 2                              | 3                               | 50                          | 66       |
| 16:00 – 17:00 | 19                             | 48                              | 20                          | 27       |
| 17:00 – 18:00 | 2                              | 19                              | 3                           | 4        |
| 18:00 – 19:00 | 3                              | 2                               | 1                           | 1        |

With regards to the above, the surveys identified a maximum parking demand of circa 70 spaces in the main Campus car park albeit following a spot count in term time, this has been factored up to circa 100 vehicles parked as a maximum in the main car park to the north of Pibwrlwyd Lane (and circa 30 cars parked to the south). The busy periods for the Campus tend to be between 09:45 – 12:00 and during the spot count, there were 125 cars parked across the entire Campus in all car parks.

In addition to the above, parking survey spot-counts were also undertaken at the other Campus locations, which indicated the total number of spaces across all three locations, as shown in **Table 2.3**. With regards to a parking ratio, it can be concluded that based on a total of 3,613 staff and learners across all Campus sites (and a total of circa 310 spaces parking demand at all locations), there is a current demand of around **1 space per 11.5 learners and staff across all Campus locations as an average (3,613 / 310 = 11.5)**.

Further to this, if the existing Pibwrlwyd Campus parking ratio of learners and staff to cars parked is used for the entire Campus (125 cars parked), which is 8% (1,455 learners + 118 staff = 1,573), and apply this to the

overall learners and staff to be at the Campus in the future (3,613 in total), then this equates to a future demand of circa 290 parking spaces overall (with 30 spaces to the south and 260 to the north).

**Table 2.3 Coleg Sir Gar Total Parking Demand (All Surveyed Campus Locations)**

| Time        | Ammanford | Jobs Well | Pibwrlwyd | Total |
|-------------|-----------|-----------|-----------|-------|
| 07:00-08:00 | 13        | 17        | 7         | 37    |
| 08:00-09:00 | 94        | 23        | 44        | 161   |
| 09:00-10:00 | 146       | 40        | 90        | 276   |
| 10:00-11:00 | 148       | 65        | 93        | 306   |
| 11:00-12:00 | 148       | 64        | 89        | 297   |
| 12:00-13:00 | 145       | 66        | 63        | 274   |
| 13:00-14:00 | 122       | 69        | 74        | 265   |
| 14:00-15:00 | 125       | 68        | 66        | 259   |

| 16:00-17:00 | 92        | 61        | 27        | 180   |
| 17:00-18:00 | 13        | 57        | 4         | 74    |
| 18:00-19:00 | 4         | 50        | 1         | 55    |

### Local Highway Network

The key highway links in the vicinity of the proposed development site are managed and maintained by CCC in their role as the Local Highway Authority. The key highway links are described below with the local routes shown in **Figure 2.3** below and descriptions below.

#### A484

The A484 is a key regional distributor road within Carmarthenshire providing a direct connection between Carmarthen and the A40 / A48 to the north and Kidwelly, Pembrey and Llanelli to the south. Within the immediate vicinity of the Campus the A484 is well lit with a carriageway width of around 7.5 metres. There is generally no direct frontage on either side of the carriageway. On the western side of the carriageway there is a 3-metre-wide shared use walking and cycling path which is designated as National Cycle Network Route 4. This cycling route runs along the alignment of the A484 providing direct connections between the site, Carmarthen, Llanelli and beyond.

#### Pibwrlwyd Lane

Pibwrlwyd Lane is a rural lane providing access to the Pibwrlwyd Campus of Coleg Sir Gar, some agricultural land uses and residential properties, which connects with the A484 at the 4-arm Pibwrlwyd Roundabout. Within the vicinity of the A484 and the access / egress arrangement to / from Coleg Sir Gar the lane is around 6 metres wide with double yellow line 'no parking or waiting at any time' restrictions in place. Along this stretch of carriageway, the lane is also well lit and surfaced to a high standard. Following the egress arrangement to Coleg Sir Gar the lane narrows to a rural residential access lane around 4 metres in width.

## A48/A40

The A48 / A40 are two of the major strategic routes within the region. They connect with the A484 via Pensarn Roundabout on the north-western periphery of the site. The A48 trunk road provides a direct connection between Carmarthen and the M4 motorway around 19km to the south-east of the site. The A40 trunk road provides direct connections between Carmarthen to West Wales including Haverfordwest and to the east to Brecon and Abergavenny and continues to until it reaches the M40 at High Wycombe. Within the immediate vicinity of the site both roads are dual carriageways subject to the national speed limit.

**Figure 2.3 Site Location and Local Highway Network**

## 2.5 Sustainable Travel

### Introduction

Walking and cycling form sustainable modes of transport which not only provide benefits to residents but help to reduce the amount of congestion and pollution within the area.

Guidance on the preferred maximum walking distances to amenities is given in the Chartered Institution of Highways and Transportation (CIHT) document, Providing for Journeys on Foot (2000). The Guidelines indicate that a walking distance of 400m is acceptable for trips to bus stops and local shops, with 800m being the preferred maximum. The corresponding walking distances for trips to work and school are given as 500m and 1,000m, respectively. A preferred general maximum walking distance of 2,000m is identified.

*Manual for Streets* (MfS) reinforces this advice, stating that "walkable neighbourhoods" should have a range of facilities within 800m (a 10-minute walk). However, this is not regarded as the upper limit for walking

journeys and MfS notes that walking offers the greatest potential to replace short car trips, particularly those under 2km.

Cycling also provides the opportunity as a substitute for a short car journey, with the CIHT document, *Planning for Cycling*, stating:

*'The majority of cycling trips are for short distances, with 80% being less than five miles and with 40% being less than two miles. However, the majority of trips by all modes are also short distances (67% are less than five miles, and 38% are less than two miles); therefore, the bicycle is a potential mode for many of these trips (DfT, 2014a).'*

The Active Travel Act Design Guidance states that:

*'Walking as a mode of travel predominates for journeys of less than two miles whilst cycling is more convenient for longer journeys, typically of up to five miles for regular journeys.'*

## Walking

The Campus is well situated to benefit from local walking infrastructure which connects the Campus to local public transport opportunities and local facilities. **Figure 2.4** indicates walking catchments for 800m to 2km, as well as the PROW network (albeit not all footways) as well as the location of Carmarthen Railway Station. It is pertinent to note that the Railway Station is just within the 2km walk distance.

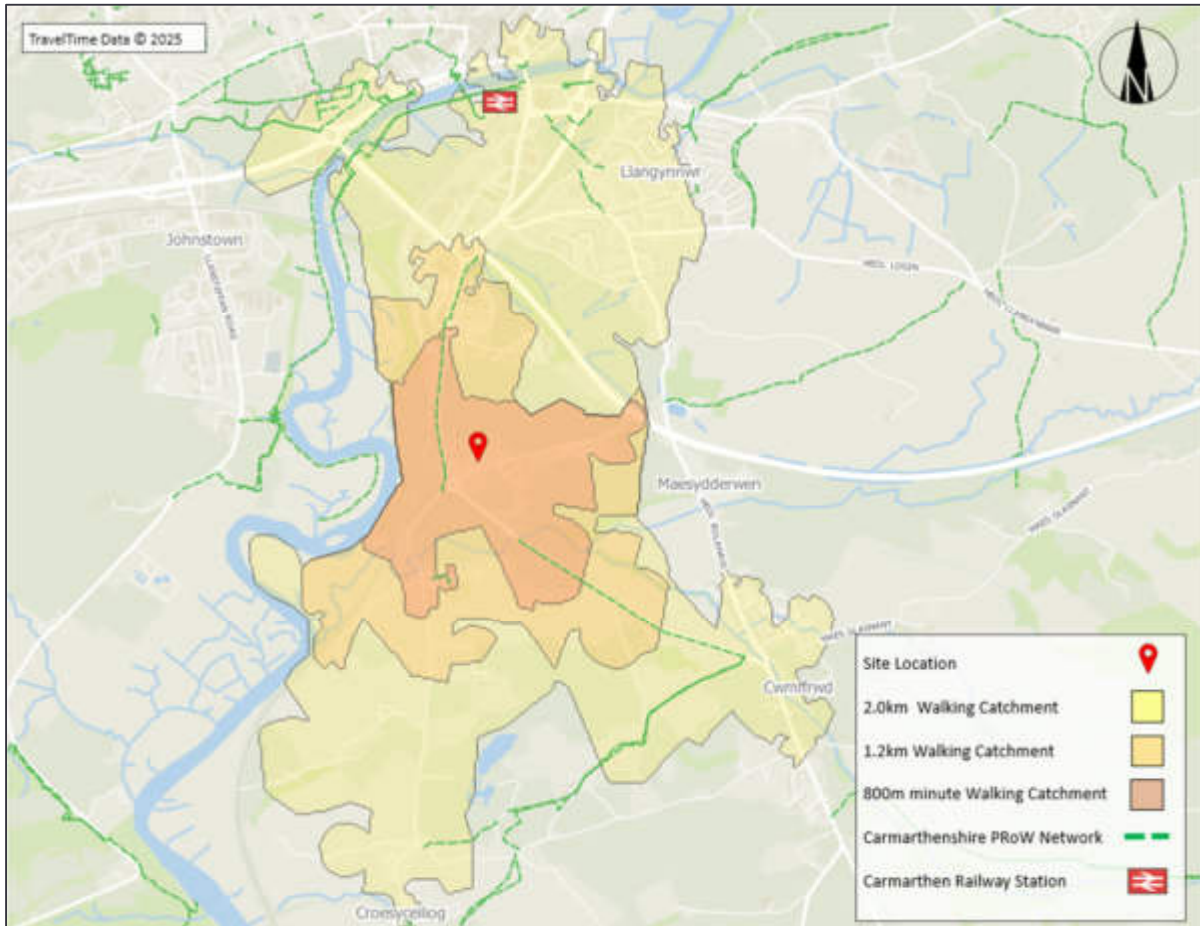

Within the vicinity of the College, Pibwrlwyd Lane provides a footway on the southern side of the carriageway as well as an intermittent footway on the northern side. This footway connects to the A484 in both the north and the south, where further footways are provided. To the north and south are shared use paths that provide a connection to the town centre in the north via a network of footways and crossings.

In the local area, pedestrian crossing infrastructure includes the following:

- Crossing opportunities at the Pibwrlwyd Lane / A484 roundabout in the form of dropped kerbs, tactile paving and refuge islands. This enables crossing over to / from the footway located on the western side of the A484 between the College and the town centre;
- Refuge island with dropped kerbs and tactile paving at the location of the existing bus stops, as well as at the access opposite Halfords in the north;
- Staggered signalised crossing opposite Morrisons supermarket; and,
- Underpass routes at the Pensarn Roundabout.

Figure 2.4 Walking Catchments and PROW Network

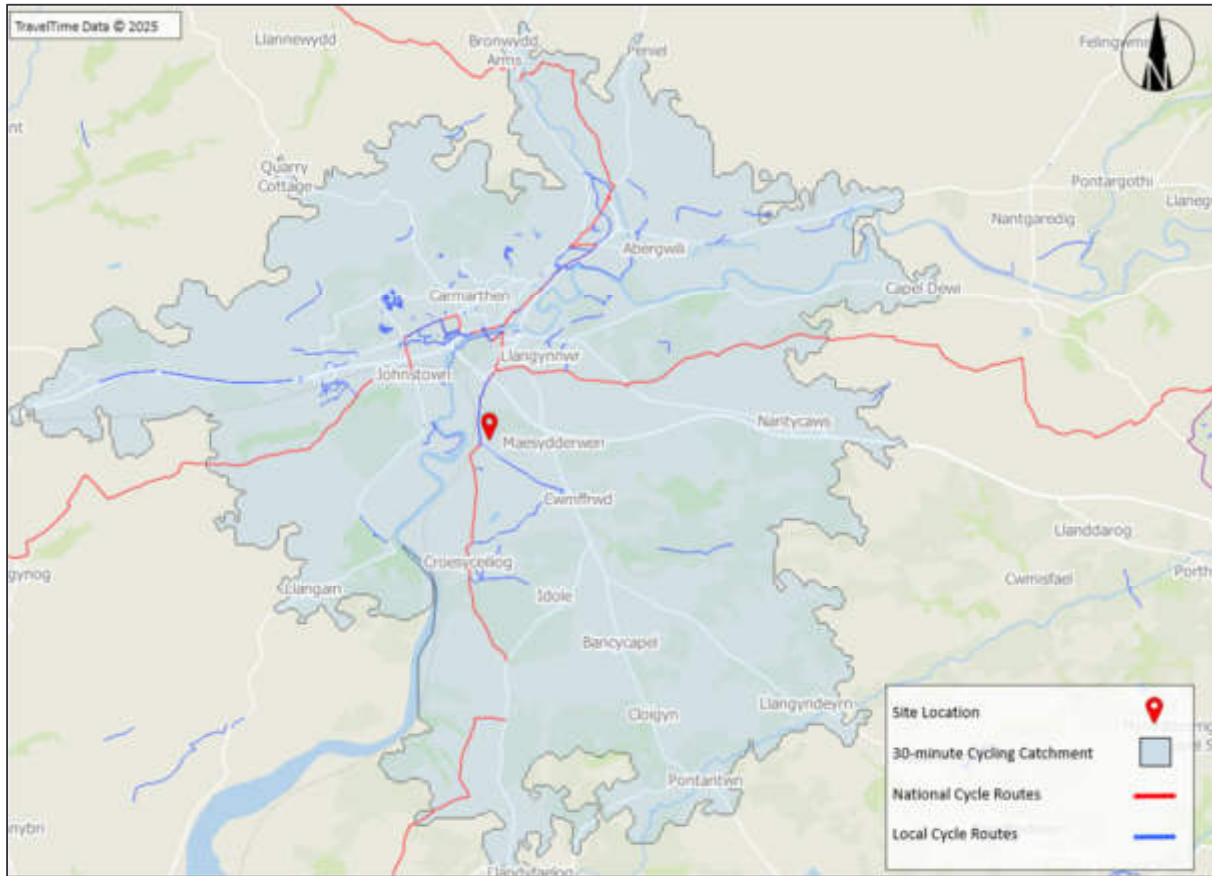

### Cycling

The College is located close to / along National Cycle Routes as well as shared use routes, as shown in **Figure 2.5** below. There are a number of shared use paths in the local area that connect the Campus to the town centre in the north including the bus station and railway station in the north.

Figure 2.5 30-Minute / 8km Cycle Catchment and Local Cycle Routes

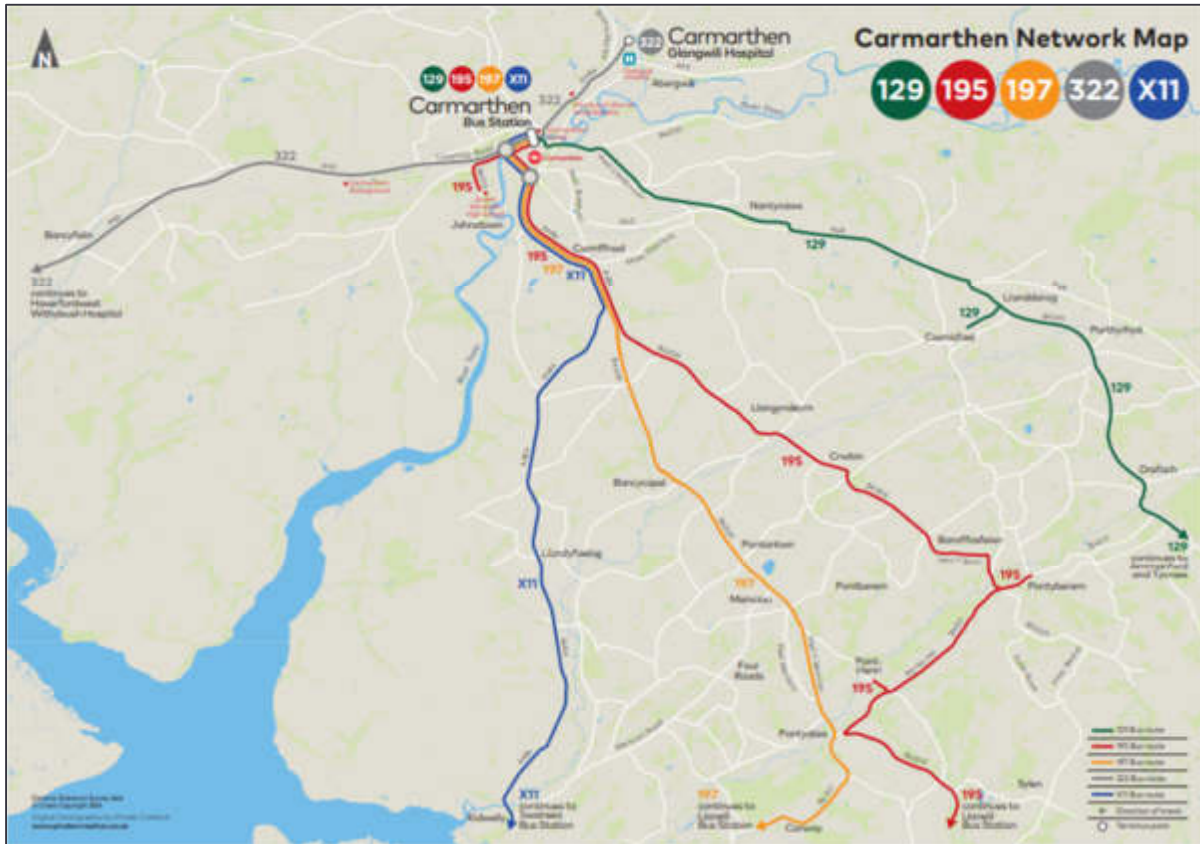

## Public Transport

### Bus Services

The closest bus stops to the Campus are located towards the west along the A484 and within a 150m walk. The northbound and southbound stops provide access to services including the main services 195, 197, and X11. The routes provide services between Llanelli bus station and Carmarthen Bus Station at frequent intervals throughout the morning, day and evening. A route map is shown in **Figure 2.6** below (all operated by First Bus).

Figure 2.6 Local Bus Route Map

### Rail services

The closest railway station to the College is Carmarthen, which can be accessed by bus, walking and cycling. The station is located circa 2km to the north and provides services to destinations such as London Paddington, Milford Haven, Cardiff, Tenby and Pembroke. With regards to the travel survey, around 2% of learners currently travel to the Campus by train.

## 2.6 Existing Travel Patterns

Travel surveys were undertaken at each Campus location with the results shown in **Table 2.4**.

As shown below, it can be seen that the most accessible location is Pibwrlwyd Campus, with by far the lowest car driver modal share, the highest number of car sharers and the highest level of public transport usage. This further supports this location as the most optimum location for the proposals to occur (i.e., when compared to the other Campus locations).

**Table 2.4 Method of Travel to College**

| Mode                         | Ammanford | JobsWell | Pibwrlwyd |
|------------------------------|-----------|----------|-----------|
| Walk                         | 5%        | 9%       | 2%        |
| Cycle                        | 0%        | 0%       | 2%        |
| Car drive alone              | 65%       | 73%      | 43%       |
| Car as passenger             | 3%        | 5%       | 11%       |
| Car dropped off or picked up | 2%        | 0%       | 7%        |
| Public Bus                   | 2%        | 7%       | 12%       |
| Funded Bus                   | 21%       | 4%       | 20%       |
| Train                        | 0%        | 0%       | 2%        |
| Other                        | 3%        | 2%       | 2%        |
| Total                        | 100%      | 100%     | 100%      |

## 2.7 Personal Injury Accident Data

The purpose of assessing recorded PIAs is to determine whether there is a history of accidents in proximity to the proposed development site and to investigate whether there are any patterns or contributing factors to the accidents recorded.

The impact of casualties differs according to the severity of the injuries sustained. Three groups are usually differentiated as follows:

- **Fatal:** Any death that occurs within 30 days from causes arising out of the accident;
- **Serious:** Records casualties who require hospital treatment and have lasting injuries, but who do not die within the recording period for a fatality; and,
- **Slight:** Where casualties have injuries that do not require hospital treatment, or, if they do, the effects of the injuries quickly subside.

The PIA search area included links and junctions within the vicinity of the proposed development site. The PIA data search has revealed only 3 slight accidents over a 5-year period within the vicinity of the Campus. Overall, whilst all PIAs are regrettable, the frequency and severity of accidents recorded within the search area over the latest five-year period does not suggest there are any inherent safety issues on the network. As a result, the proposed development is not predicted to have a material impact on highway safety.

## 3. Planning Policy

### 3.1 National Planning Policy

#### Llwybr Newydd: The Wales Transport Strategy 2021

Llwybr Newydd, the Wales Transport Strategy sets out a vision for how our transport system can deliver priorities for Wales, helping to put us on a pathway to creating a more prosperous, green and equal society. The national Wales Transport Strategy was published in March 2021.

The Transport Strategy aims to bring services to people in order to reduce the need to travel and notes that *'if more people can walk and cycle for everyday trips, we will reduce our dependency on cars.'*

It sets a long-term direction and three urgent and immediate priorities:

- **Priority 1:** Bring services to people in order to reduce the need to travel;
- **Priority 2:** Allow people and goods to move easily from door to door by accessible, sustainable and efficient transport services and infrastructure; and,
- **Priority 3:** Encourage people to make the change to more sustainable transport.

The thrust of Llwybr Newydd is to achieve a shift away from private car use to more sustainable transport modes for the majority of journeys. Investment will be promoted into low-carbon, accessible, efficient and sustainable transport services and infrastructure that enable more people to walk, cycle and use public transport, and lower emission vehicles.

Where there is a need for new transport infrastructure, the sustainable transport hierarchy should be considered to give priority to meeting the demand for travel by walking, cycling and public transport ahead of private motor vehicles.

#### Future Wales: The National Plan 2040

Future Wales is the national development framework for Wales which sets out the direction for development in Wales up to 2040. Future Wales aims to promote development that enhances wellbeing and quality of life.

Future Wales pledges to shape growth around sustainable forms of transport and places that make people and the environment healthier. Development will focus on active travel and public transport, allied with a reduced reliance on private vehicles.

Policy 12: Regional Connectivity of Future Wales outlines the following with regard to car parking at future developments:

- *"Planning authorities must act to reduce levels of car parking in urban areas, including supporting car-free developments in accessible locations and developments with car parking spaces that allow them to be converted to other uses over time. Where car parking is provided for new non-residential development, planning authorities should seek a minimum of 10% of car parking spaces to have electric vehicle charging points."*

## Planning Policy Wales (edition 12, 2024)

Planning Policy Wales (PPW) sets out the land use planning policies of the Welsh Assembly Government (the Assembly Government). It is supplemented by a series of Technical Advice Notes (TANs). Procedural advice is given in circulars and policy clarification letters.

Edition 12 was published in February 2024. PPW states at Section 4.1 that:

*'The planning system should enable people to access jobs and services through shorter, more efficient and sustainable journeys, by walking, cycling and public transport. By influencing the location, scale, density, mix of uses and design of new development, the planning system can improve choice in transport and secure accessibility in a way which supports sustainable development, increases physical activity, improves health and helps to tackle the causes of climate change and airborne pollution by:*

- *Bringing services to people to reduce the need to travel. This is not about preventing travel altogether, it is about planning ahead for better physical and digital connectivity to support access to more local services, and more home and remote working. If more people can walk and cycle for everyday trips, we will reduce our dependency on cars.*
- *Allowing people and goods to move easily from door-to-door by accessible, sustainable and efficient transport. To achieve this, we will need to invest in reliable, efficient and affordable transport services that people want to use, can use and do use. We also need the transport infrastructure to support those services. We will make sure our transport infrastructure is safe, accessible, well-maintained and future-proofed, to adapt to climate change.*
- *Where we need new transport infrastructure, we will use the sustainable transport hierarchy to give priority to meeting the demand for travel by walking, cycling and public transport ahead of private motor vehicles.*
- *Encouraging people to make the change to more sustainable transport. If we are going to meet our climate change targets, we also need people to travel differently. Which means making it easier to do the right thing. We will do this by making low-carbon sustainable transport more attractive and more affordable, and by adopting innovations.'*

The overarching goal of The Welsh Government is to reduce reliance on single occupancy vehicles and support a modal shift to walking, cycling and public transport.

PPW states that:

*'The planning system has a key role to play in reducing the need to travel and supporting sustainable transport, by facilitating developments which:*

- *Are sited in the right locations, where they can be easily accessed by sustainable*
- *Modes of travel and without the need for a car;*
- *Are designed in a way which integrates them with existing land uses and neighbourhoods: and;*
- *Make it possible for all short journeys within and beyond the development to be easily made by walking and cycling.'*

### **Promoting Walking and Cycling**

PPW details the Welsh Government's objective of promoting active travel and references the Active Travel (Wales) Act 2013. This Act is referenced at para, 4.1.26 where PPW 12 states:

*'The Active Travel (Wales) Act 2013 makes walking and cycling the preferred option for shorter journeys, particularly everyday journeys, such as to and from a workplace or education establishment, or in order to*

access health, leisure or other services or facilities. The Active Travel Act requires local authorities to produce Active Travel Network Maps (ATNMs), identifying the walking and cycling routes required to create fully integrated networks for walking and cycling to access work, education, services and facilities’.

PPW also states that:

- *‘The planning system has an important role to play in promoting and supporting the delivery of the Active Travel Act and creating the right environments and infrastructure to make it easier for people to walk and cycle, including new and improved routes and related facilities.’*

PPW includes at Figure 9 the following Sustainable Transport Hierarchy for Planning:

In relation to the sustainable transport hierarchy, PPW states that:

- *‘The sustainable transport hierarchy should be used to reduce the need to travel, prevent car-dependent developments in unsustainable locations, and support the delivery of schemes located, designed and supported by infrastructure which prioritises access and movement by active and sustainable transport. The sustainable transport hierarchy must be a key principle in the preparation of development plans, including site allocations, and when considering and determining planning applications.’*

### **Parking**

In relation to parking, PPW details:

- *‘Car parking provision is a major influence on how people choose to travel and the pattern of development. Where and how cars are parked can in turn be a major factor in the quality of a place.’*

Additionally, PPW states:

- *‘A design-led approach to the provision of car parking should be taken, which ensures an appropriate level of car parking is integrated in a way which does not dominate the development. Parking provision should be informed by the local context, including public transport accessibility, urban design principles and the objective of reducing reliance on the private car and supporting a modal shift to walking, cycling and public transport.’*

PPW notes that Local authorities are required to develop an integrated parking strategy which complies with the overall transport and locational policies of the development plan. Additionally, maximum levels of parking for broad classes of development should be established in conjunction with a threshold size of development above which such levels will apply.

Technical Advice Note 18 also details national planning policy on parking matters and this is described in subsection 2.6.

### Technical Advice Note 18: Transport (TAN18)

TAN 18 identifies that Planning Policy Wales and the Wales Transport Strategy both aim to secure the provision of transport infrastructure and services, which improve accessibility, build a stronger economy, improve road safety and foster more sustainable communities.

To achieve this and the core objectives, the following initiatives relevant to the proposed development are:

- *'Reducing the need to travel;*
- *Promoting walking and cycling;*
- *Managing parking provision; and,*
- *Encouraging the location of development near other related uses to encourage multi-purpose trips.'*

TAN 18 notes that where larger housing development applications require a Transport Assessment information on measures to encourage sustainable travel, (as detailed in TAN 18) shall be incorporated in the TA.

### Transport Implementation Strategy

It is considered that the proposed development is fully in compliance with all relevant national and local planning and transport related planning policy guidance.

A Travel Plan will be prepared for the development which will detail measures and objectives to encourage and facilitate sustainable travel to and from the proposed development by staff and learners. The Travel Plan encompasses the principal objective and component of the Transport Implementation Strategy as required by guidance detailed in Planning Policy Wales Technical Advice Note 18: Transport.

Paragraph 9.7 of TAN 18 states:

- *'TIS resulting from the TA process are intended to incorporate all components of a Travel Plan and ensure these are integrated with design elements of new development.'*
- *In conclusion, it is considered that in transport and planning policy terms the planning application proposes 'accessible housing development' as defined in paragraphs 3.4 to 3.6 in Planning Policy Wales Technical Advice Note 18: Transport.'*

### Active Travel Act Guidance 2021 (Wales)

The Active Travel Act places a requirement on local authorities to continuously improve facilities for those who walk and cycle and to prepare information, such as maps, that identify current and potential future routes for their use.

The Act also requires highway authorities to have regard in the construction and improvement of highways to enhance provision for cyclists and pedestrians. The Active Travel Act makes provision for:

- *'Approved maps of existing active travel routes and related facilities in a local authority's area;*
- *Approved integrated network maps of the new and improved active travel routes and related facilities needed to create integrated networks of active travel routes and related facilities in a local authority's area;*

- *Requiring local authorities to have regard to integrated network maps in preparing transport policies and to make continuous improvements in the range and quality of active travel routes and related facilities; and,*
- *Requiring the Welsh Ministers and local authorities, in constructing and improving highways, to have regard to the desirability of enhancing the provision made for walking and cycling.'*

With regards to new development, there is further guidance:

- *'Developments that do not adequately make provision for walking and cycling should not be approved. This may include adequate off-site improvements for pedestrians and cyclists using existing highways that are affected by the development.*
- *Planning Policy Wales requires that sustainable transport measures be included before the development is complete "Importantly, sustainable transport infrastructure and services should be prioritised and put in place from the outset, before people have moved in and travel patterns have been established.'*

## 3.2 Local Policy

### Second Deposit Revised Carmarthenshire Local Development Plan 2018 – 2033

- *'Strategic Policy – SP 17: Transport and Accessibility Sustainable and deliverable development requires an integrated, accessible, reliable, efficient, safe, and sustainable transport network to underpin delivery'.*
- *'TRA2: Active Travel Proposals which enhance walking and cycling access by incorporating the following within the site, and/or making financial contributions towards the delivery of off-site provision, will be supported.'* This includes
- *'TRA5: Highways and Access Standards in Development Proposals for development will be permitted where they: a) Incorporate the necessary access standards reflecting the road classification and conditions; b) Include appropriate visibility splays and design features necessary to ensure highway safety and that the ease of movement is maintained, and enhanced where required; c) Do not generate unacceptable levels of traffic which has a detrimental impact on the surrounding road network, highway safety, or would cause significant harm to the amenity of residents. d) Will not result in offsite congestion in terms of parking or service provision.'*

## 3.3 Vehicle Parking Standards

Parking standards dictate a level of 1 space per each member of teaching staff, 1 space per 2 ancillary staff, 1 space per 5 students and 5 visitor spaces. This would require a parking level in excess of 500 spaces and is not considered a sustainable approach for the site.

It is considered that this location is not Zone 1, therefore Zone 2 – 6 standards have been applied.

## 3.4 Policy Summary

With regards to planning policy at all levels, the following can be concluded, with the effects of development set out later in the Report.

- The Campus is already located at the site and therefore has an established location which is deemed to be accessible.

- The Campus is accessible by foot, bicycle and public transport.
- The proposals seek to further enhance connectivity to the wider Active Travel Network as well as contribute by including improvements along Pibwrlwyd Lane.
- The proposals do not result in a detrimental impact on the highway network.

## 4. Development Proposal

### 4.1 Proposal Overview

The development proposal will result in the creation of a new Creative Arts Hub catering for an additional 700 students and the new Vocational Skills Hub catering for an additional 1,685 students (all FTE), with a mix of full and part-time delivery including evenings and weekends. The new College will bring together all Campus locations including Pibwrlwyd, Ammanford and Jobs Well into one location.

In total, it is expected that the Campus will provide space for up to 3,613 learners and staff overall albeit this is subject to confirmation. As previously noted, it is expected that the future total capacity at the Campus will be in the region of 1,100 learners, up from 400 learners at the moment, so a roughly 2.75x increase in the number of pupils.

### 4.2 Parking Strategy / Justification

The proposed parking strategy has been discussed and agreed in principle with CCC Highways albeit the strategy is also set out below and is based on an assessment of potential parking demand undertaken using a number of methodologies. It is pertinent to note that it is difficult to predict the exact number of spaces, albeit a high-level number estimation can be reached and also further refined following PAC submission.

#### Policy Parking Requirements

Parking standards dictate a level of 1 space per each member of teaching staff, 1 space per 2 ancillary staff, 1 space per 5 students and 5 visitor spaces. It is considered that this location is not Zone 1, therefore Zone 2 – 6 standards have been applied. **This would however require a parking level in excess of 500 spaces** and is not considered a sustainable approach for the Campus, particularly given the number of coaches that the College with run.

#### Parking Based on Existing Surveys across College Campus Locations

As shown in the existing car park surveys, there is an approximate **maximum existing car parking demand of circa 310 spaces across all existing Campus locations**. This does not however take into the account the more sustainable location of the Pibwrlwyd Campus, which has the lowest level of car driver usage (43% car driver alone).

If the existing Pibwrlwyd Campus parking ratio of learners and staff to cars parked is used for the entire Campus (125 cars parked in the most recent spot count over the Campus), which is 8% of total people at the Campus (1,455 learners + 118 staff = 1,573 in total), and apply this to the overall learners and staff to be at the Campus in the future (3,613 in total), **then this equates to circa 290 parking spaces overall (with circa 35 spaces to the south and circa 255 spaces to the north)**.

#### Parking Demand Based on Maximum Pupil Uplifts

The existing college has a maximum capacity of around 400 learners with the future College having a capacity of around 1,100 learners; this represents an increase of around 2.75 / 275%. **If the existing in / out ATC profile is uplifted by this ratio, then this results in a parking accumulation / demand of 263 spaces across the northern part of the Campus.**

## Parking Provision / Demand Summary

Based on an assessment of determining / justifying appropriate levels of parking numbers for the redeveloped College, it is reasonable to suggest that future parking demand could be in the region of 250 spaces, with this level of parking striking the right balance when considered against improvements to sustainable / active travel measures and the number of coaches that will be in operation.

The current masterplan shows up to approximately 250 spaces in the northern main car park area, which, does not necessarily accord to standards, however, does accord with the predicted demand at the Campus. In total the overall parking on the Campus is as follows:

- 240 standard spaces;
- 12 disabled spaces;
- 2 van / minibus spaces for maintenance / small deliveries; and,
- 9 - 10 coach spaces for up to 13m / 57-seater coaches.

### 4.3 Coach Parking

It is proposed that coach parking is undertaken to the south of Pibwrlwyd Lane. This was subject to a lengthy design process whereby it was determined that this location was the most suitable.

The coach area provides space for 7 - 9 coaches, with 1 coach space available at the main Campus entrance to the north of Pibwrlwyd Lane. On this basis, space for 10 coaches could be accommodated without impacting the operation of the public highway.

As previously noted, around 20% of pupils currently travel to Pibwrlwyd Campus by funded bus. Discussions with the education department at the Council has indicated that there would be a requirement for up to 10 buses in the future, which has a total capacity of circa 570 pupils based on 57-seater / 13m coaches (which are the maximum coach sizes expected).

- **Drawing Reference 211245-100, 211245-101 and 211245-102 (Appendix B)**

### 4.4 Access

#### Vehicle Access

It is proposed that vehicle access will be taken from the following locations:

#### *Pibwrlwyd Lane West (North - Main Car Park Access)*

The existing junction will be amended to an all-movements junction which allows both 'in' and 'out' trips to occur; the existing arrangement is an 'in' only from this location. It is pertinent to note that final drawings will be finalised as part of the planning application.

#### *Pibwrlwyd Lane West (South - Coach Access)*

The southern area will be upgraded from the existing overspill car park, to provide a coach drop-off / pick-up area. There will be a separate 'in' and 'out' access to ensure this area operates effectively. It is pertinent to note that final drawings will be finalised as part of the planning application.

#### ***Pibwrlwyd Lane East (East - Construction Workshop Access)***

A new access will be provided in this location, providing access to the construction workshops on the eastern side of the Campus. It is pertinent to note that final drawings will be finalised as part of the planning application.

#### **Pedestrian and Cycling Access (Active Travel)**

It is proposed that main pedestrian access is taken from the A484 via a new connection albeit access is also able to be taken adjacent to the vehicular entrance from Pibwrlwyd Lane.

It is proposed that main cyclist access will be taken from the new connection onto the A484 in the west.

Further footway and crossing infrastructure improvements are to be provided along Pibwrlwyd Lane to enhance connectivity.

- **Drawing Reference – 211245-109 (Appendix C)**

### **4.5 Visibility Splays**

Visibility splays have been provided for each access junction based on 20mph as per the advice located in <https://datamap.gov.wales/maps/roads-affected-by-changes-to-the-speed-limit-on-restricted-roads/view#/>. This requires splays of 2.4m by 25m in accordance with Manual for Streets.

Pedestrian visibility splays will also be incorporated in the final scheme.

- **Drawing Reference 211245-108 (Appendix D)**

### **4.6 Stopping-up Order and Highway Dedication**

In order to deliver the proposals, there will need to be a level of stopping up to the public highway as well as highway dedication.

- **Drawing Reference 211245-107 (Appendix E)**

### **4.7 Road Safety Audit**

A Stage 1 Road Safety Audit is yet to be undertaken albeit this will be undertaken for the planning submission. An audit brief will be discussed and agreed in advance with the Council.

### **4.8 Cycle parking**

Cycle parking will be provided for both learners and staff. Staff provision will be located within the building. Learner provision will be provided on the northern part of the Campus to tie-in with the Active Travel route provided from the A484 in the west.

### **4.9 Deliveries and Servicing Strategy**

Deliveries will be undertaken for both sides of the Campus including the main building and the construction workshop albeit the nature of deliveries will be different. It is pertinent to note that the construction workshops will be limited to 10m rigid vehicles only, with a maximum of 2 deliveries per day as a worst-case.

Deliveries will be managed and details kept on record / file.

With regards to refuse collection, this will be undertaken in the same manner as the delivery strategy.

- Drawing Reference 211245-103, 211245-104 and 211245-106 (Appendix F)

#### 4.10 Emergency Service Access

Emergency service vehicles can access the site and serve the required areas, with a fire strategy prepared as a separate document.

## 5. Effects of Development

### 5.1 Vehicle and Multi-Modal Trip Generation

In order to determine an appropriate car driver trip generation for the new Campus, a combination of data has been used based on the existing in / out count information which has been calibrated based on car park spot counts, the multi-modal data and the proposed level of car parking provided at the site (circa 97 existing demand and 250 spaces proposed = factor of circa 2.5).

It is also pertinent to note that up to 9 – 10 coaches can be accommodated at the Campus, with there expected to be a large proportion of pupils arriving by bus (in excess of 20% in the future). The proposed car driver trip generation is provided in **Table 5.1** and the full estimated multi-modal is provided in **Table 5.2**.

It is difficult to exactly predict the level of College Campus traffic on the basis that there are a few unknowns with regards to the future operation and the catchment areas. The below is based on the best possible synthesis of available data, although some numbers have growth applied, with arrival / departure profiles slightly imbalanced as a result.

The below is however seen as a fair reflection with regards to total two-way traffic and, in particular during the morning and evening peak periods.

**Table 5.1 Indicative Car Driver / Car Share Campus Vehicle Trip Generation**

| Vehicle Trip                             | AM Peak    |            | PM Peak    |             | Daily       |             |
|--|------------|------------|------------|-------------|-------------|-------------|
|  | IN         | OUT        | IN         | OUT         | IN          | OUT         |
| Vehicle Trips (Existing North side only) | 47         | 9          | 21         | 70          | 203         | 205         |
| Vehicle Trips (Existing Whole Campus)    | 62         | 11         | 34         | 78          | 266         | 269         |
| Vehicle Trips (Proposed North Side only) | 135        | 26         | 68         | 190         | 587         | 591         |
| <b>Car Driver (Net Additional)</b>       | <b>+73</b> | <b>+15</b> | <b>+34</b> | <b>+111</b> | <b>+321</b> | <b>+323</b> |

As shown above, there could be an additional two-way flow of 88 vehicles in the morning peak and 145 vehicles in the evening peak. Over the course of an entire day, the new Campus could generate demand for an additional 644 two-way vehicle trips.

It is pertinent to note that this likely to be an over-estimation on the basis of how many coaches the College would provide in the future, with capacity for in the region of 500 pupils over the course of an entire day. Increases in walking, cycle and public transport are also expected and will be further promoted through the Travel Plan.

**Table 5.2 Indicative Proposed Multi-Modal Trip Generation (Net Additional)**

| Mode                              | AM Peak    |            | PM Peak    |             | Daily       |             |
|-----------------------------------|------------|------------|------------|-------------|-------------|-------------|
|                                   | IN         | OUT        | IN         | OUT         | IN          | OUT         |
| Walk (2%)                         | +1         | +0         | +1         | +2          | +6          | +6          |

| Other (2%)                        | +1         | +0         | +1         | +2          | +6          | +6          |
| <b>Total (100%)</b>               | <b>+73</b> | <b>+15</b> | <b>+34</b> | <b>+111</b> | <b>+321</b> | <b>+323</b> |

## 5.2 Highway Impact and Traffic Distribution

A distribution exercise was undertaken based on turning counts at the Pibwrlwyd Lane roundabout and then distributed on the network in accordance with further network turning flows.

With regards to the resultant highway impact, **Table 5.3** sets this out in summary and **Appendix G** sets this out in more detail in Flow Diagram format, with the following scenarios presented:

- Surveyed Flows 2023 AM, PM Peak
- Factored Surveyed Flows Observed 2025 AM, PM Peak
- Development Traffic AM, PM Peak
- Wider Allocation Traffic AM, PM Peak
- Base Scenario 2027 AM, PM Peak
- Development Scenario 2027 AM, PM Peak
- Base Scenario 2032 AM, PM Peak
- Development Scenario 2032 AM, PM Peak

**Table 5.3 Junction Impacts (Two-way Flows) AM Peak**

| Junction                   | Observed<br>2025 | Dev Traffic | Allocation<br>Traffic | Base Scenario<br>2027* | Dev Scenario<br>2027 | Base Scenario<br>2032** | Dev Scenario<br>2032 |
|----------------------------|------------------|-------------|-----------------------|------------------------|----------------------|-------------------------|----------------------|
| Pibwrlwyd Roundabout       | 1,820            | +88         | +52                   | 1,847                  | 3,869                | 1,873                   | 1,961                |
| A484 New Priority Junction | 1,717            | +68         | +263                  | 1,849                  | 1,917                | 1,980                   | 2,048                |

| A484 New Priority Junction | 1,256            | +117        | +375                  | 1,444                 | 1,561                | 1,631                 | 1,749                |
| Morrisons Roundabout       | 2,164            | +117        | +338                  | 2,333                 | 2,450                | 2,502                 | 2,619                |
| Pensarn Roundabout         | 4,924            | +117        | +275                  | 5,061                 | 5,179                | 5,199                 | 5,316                |

Note: 2027 includes 50% of committed development and 2032 includes 100% of committed development

### 5.3 Junction Modelling

Junction modelling was undertaken at the above locations for the aforementioned scenarios, with an overall result provided in **Table 5.5** below and detailed outputs provided in **Appendix H**. A Red / Amber / Green (RAG) system has been adopted to assist with identifying the results of each scenario.

The junction modelling indicates that that none of the assessed junction are expected to experience capacity problems albeit the Morrison’s roundabout is approaching an RFC of 0.85.

This is reasonably consistent with the Asbri Transport TA modelling outputs, which indicated the following overarching results for each junction:

- **Pibwrlwyd Roundabout** - Max RFC of 0.65 in the PM Peak in 2037.
- **A484 New Priority Junction** - Max RFC of 0.83 in the PM Peak in 2037.
- **Morrisons Roundabout** - Max RFC of 0.86 in the PM Peak in 2037.
- **Pensarn Roundabout** - Operating close to capacity with limited available PRC in the AM Peak.

Table 5.5 TTC Junction Modelling RAG Summary (Overall Junction Performance)

| Junction                   | Observed       | Base Scenario  | Dev Scenario   | Base Scenario  | Dev Scenario   |
|----------------------------|----------------|----------------|----------------|----------------|----------------|
|                            | 2025 AM/PM     | 2027 AM/PM     | 2027 AM/PM     | 2032 AM/PM     | 2032 AM/PM     |
| Pibwrlwyd Roundabout       | Max RFC = 0.56 | Max RFC = 0.58 | Max RFC = 0.61 | Max RFC = 0.59 | Max RFC = 0.61 |
| A484 New Priority Junction | Max RFC = 0.00 | Max RFC = 0.00 | Max RFC = 0.35 | Max RFC = 0.69 | Max RFC = 0.74 |
| Morrisons Roundabout       | Max RFC = 0.70 | Max RFC = 0.76 | Max RFC = 0.76 | Max RFC = 0.81 | Max RFC = 0.81 |
| Pensarn Roundabout         | PRC = 4.1%     | PRC = 5.8%     | PRC = 5.5%     | PRC = 4.4%     | PRC = 3.5%     |

Note: Green = below 0.85 / 85%, Amber = 0.85 / 85% to 0.99 / 99%, Red = Above 1.0 / 100%

As shown above, there are considered to be no material concerns with regards to the junction modelling outputs albeit the Pensarn Roundabout does begin to experience conditions which should be considered by the Council / SWTRA.

## 6. Indicative Transport Implementation Strategy (TIS)

### 6.1 Introduction

A TIS “should set objectives and targets relating to managing travel demand for the development and set out the infrastructure, demand management measures and financial contributions necessary to achieve them. The TIS should set a framework for monitoring the objectives and targets, including the future modal split of transport to development sites”.

A Transport Implementation Strategy is set out in the following sections below.

### 6.2 Active Travel and Highway Improvements

- Active Travel connection directly to / from the A484;
- Footway enhancements to Pibwrlwyd Lane;
- Crossing improvements to Pibwrlwyd Lane; and,
- Internal footway links.

### 6.3 Coach Management Plan

A Coach Management Plan will be prepared for the planning application and will include the following overarching details:

- Details on the coach numbers;
- Details on the strategy for maximising uptake along with funding;
- Details on the layout, design and any associated vehicle tracking; and,
- Details on day to day operation and management.

### 6.4 Delivery Servicing Management Plan

A DSP will be conditioned as part of the planning approval.

### 6.5 Travel Plan

A standalone Travel Plan has been prepared as part of the PAC submission and will be subject to monitoring requirements.

### 6.6 Construction Management

A CEMP will be prepared by the Contractor and TTC will provide high level information in the Transport Assessment submitted for the planning application.

If necessary, a draft CEMP can be prepared for the planning application.

## 6.7 Road Safety Audit

This will be undertaken as part of the planning application.

The RSA will cover Pibwrlwyd Lane including all access points and changes to the public highway.

## 6.8 Funding

Any relevant funding mechanisms will be set out, which will include that related to WEPCo, the College and Carmarthenshire County Council where any allowances or inclusions for improvements are able to be delivered through Council mechanisms such as the INM.

## 7. Summary and Conclusion

### 7.1 Summary

The following can be summarised with regards to the existing Campus:

- The existing Pibwrlwyd Campus is home to a wide range of curricula that span further and higher education. This includes Art and Design, Animal Science, Automotive Engineering, Business and Management, Catering and Hospitality, Equine Studies, Leisure and Tourism, Teacher Training and Veterinary Nursing. The land around the Campus has a rural setting.
- The existing Pibwrlwyd Campus is served by three vehicle access points including one directly east of the roundabout with the A484 serving the northern buildings and main car park, a central access serving the northern and southern buildings and an eastern access serving the southern buildings only.
- In total, the following staff and pupil numbers are currently accommodated across all Campus locations; this is based on the data we have received from the College:
 

|                    |   |                                     |
|--------------------|---|-------------------------------------|
| o Jobs Well Campus | - | 412 learners and 62 staff           |
| o Ammanford Campus | - | 1,471 learners and 92 staff         |
| o Pibwrlwyd Campus | - | 1,459 learners and 117 staff        |
| o <b>TOTAL</b>     | - | <b>3,342 learners and 271 staff</b> |
- The Campus is located on the northern and southern side of Pibwrlwyd Lane and to the east of the A484, approximately 2km south of Camarthen and the Railway Station. There are bus stops located close to the College on the A484, north of the roundabout, providing access to bus services 195, 197, 198, B13 and X11 Cymru Clipper.
- The Campus is well located to take advantage of sustainable and active travel modes, with Pibwrlwyd Campus having the lowest car driver modal share at 43%.
- The Campus is well located to take advantage of active modes of transport albeit the location just outside the town centre is noted, with uptake by these modes currently reasonable low, with 2% walking, 2% cycling and 14% arriving by public bus (12%) and train (2%).
- There are no existing highway safety concerns on the roads surrounding the Campus location at Pibwrlwyd.

The following can be summarised with regards to the proposed Campus:

- The development proposal will result in the creation of a new Creative Arts Hub catering for an additional 700 students and the new Vocational Skills Hub catering for an additional 1,685 students (all FTE), with a mix of full and part-time delivery including evenings and weekends. The new College will bring together all Campus locations including Pibwrlwyd, Ammanford and Jobs Well. In total, it is expected that the Campus will provide space for up to 3,613 learners and staff albeit this is subject to confirmation. Notwithstanding this, for the purpose of this Transport Assessment, this worst-case scenario has been used.
- The current masterplan shows up to approximately 250 spaces in the northern main car park area, which, does not necessarily accord to standards, however, does accord with the predicted demand at the Campus. In total the overall parking on the Campus is split as 240 standard spaces, 12 disabled

spaces, 2 van / minibus spaces for maintenance / small deliveries and, 8 to 9 coach spaces for up to 13m / 57-seater coaches.

- It is proposed that coach parking is undertaken to the south of Pibwrlwyd Lane. This was subject to a lengthy design process whereby it was determined that this location was the most suitable. The coach area provides space for 7 - 9 coaches, with 1 coach space available at the main Campus entrance to the north of Pibwrlwyd Lane.
- Cycle parking will be provided for both learners and staff. Staff provision will be located within the building. Learner provision will be provided on the northern part of the Campus to tie-in with the Active Travel route provided from the A484 in the west.
- Deliveries and servicing will be undertaken within the site and a DSP can be conditioned.
- With regards to trip generation the Campus could generate up to 88 two-way vehicle trips in the AM peak and 145 two-way trips in the PM peak albeit this is likely to be an over-estimation on the basis that the College will be running a significant number of coaches which will further drive down the number of car trips.
- An assessment of trip impact has been undertaken and determines that the proposals would not result in any capacity increases to a level that would be deemed to be at or over capacity and / or require mitigation.
- A Transport Implementation Strategy (TIS) has been undertaken and will be developed further for the planning application submission.

## 7.2 Conclusion

In conclusion, it is deemed that the proposals for Coleg Sir Gar at Pibwrlwyd Campus are acceptable in highways and transport terms.

## 7.3 Next Steps

The view of CCC highways will be obtained and following on from any discussions (as well as consultation responses), relevant changes will be made to the scheme and the Transport Assessment / Travel Plan prior to the final submission.

## Analysis Set Details

| ID | Network flow scaling factor (%) |
|----|---------------------------------|
| A1 | 100.000                         |

# 2025 | | AM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Arms

### Arms

| Arm | Name        | Description | Arm type |
|-----|-------------|-------------|----------|
| A   | A484 North  |             | Major    |
| B   | Site Access |             | Minor    |
| C   | A484 South  |             | Major    |

### Major Arm Geometry

| Arm | Width of carriageway (m) | Has kerbed central reserve | Has right-turn storage | Visibility for right turn (m) | Blocks? | Blocking queue (PCU) |
|-----|--------------------------|----------------------------|------------------------|-------------------------------|---------|----------------------|
| C   | 7.60                     |                            |                        | 100.0                         | ✓       | 0.00                 |

*Geometries for Arm C are measured opposite Arm B. Geometries for Arm A (if relevant) are measured opposite Arm D.*

### Minor Arm Geometry

| Arm | Minor arm type      | Width at give-way (m) | Width at 5m (m) | Width at 10m (m) | Width at 15m (m) | Width at 20m (m) | Estimate flare length | Flare length (PCU) | Visibility to left (m) | Visibility to right (m) |
|-----|---------------------|-----------------------|-----------------|------------------|------------------|------------------|-----------------------|--------------------|------------------------|-------------------------|
| B   | One lane plus flare | 10.00                 | 7.60            | 5.11             | 4.47             | 4.21             |                       | 1.50               | 100                    | 100                     |

## Slope / Intercept / Capacity

### Priority Intersection Slopes and Intercepts

| Stream | Intercept (PCU/hr) | Slope for A-B | Slope for A-C | Slope for C-A | Slope for C-B |
|--------|--------------------|---------------|---------------|---------------|---------------|
| B-A    | 583                | 0.099         | 0.250         | 0.157         | 0.357         |
| B-C    | 714                | 0.102         | 0.257         | -             | -             |
| C-B    | 632                | 0.228         | 0.228         | -             | -             |

*The slopes and intercepts shown above include custom intercept adjustments only.*

*Streams may be combined, in which case capacity will be adjusted.*

*Values are shown for the first time segment only; they may differ for subsequent time segments.*

## Traffic Demand

### Demand Set Details

| ID | Year | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D1 | 2025 | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

**Demand overview (Traffic)**

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 672                     | 100.000            |
| B   |            | ✓            | 0                       | 100.000            |
| C   |            | ✓            | 1045                    | 100.000            |

**Origin-Destination Data****Demand (PCU/hr)**

|      | To |      |   |     |
|------|----|------|---|-----|
|      | A  | B    | C |     |
| From | A  | 0    | 0 | 672 |
|      | B  | 0    | 0 | 0   |
|      | C  | 1045 | 0 | 0   |

**Vehicle Mix****Heavy Vehicle %**

|      | To |   |   |   |
|------|----|---|---|---|
|      | A  | B | C |   |
| From | A  | 0 | 0 | 3 |

# 2025 | | PM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.00               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.00              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D2 | 2025 | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 801                     | 100.000            |
| B   |            | ✓            | 0                       | 100.000            |
| C   |            | ✓            | 455                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      | To |     |   |     |
|------|----|-----|---|-----|
|      | A  | B   | C |     |
| From | A  | 0   | 0 | 801 |
|      | B  | 0   | 0 | 0   |
|      | C  | 455 | 0 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      | To |   |   |   |
|------|----|---|---|---|
|      | A  | B | C |   |
| From | A  | 0 | 0 | 3 |
|      | B  | 0 | 0 | 0 |
|      | C  | 3 | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.00    | 0.00          | 0.0             | A       |
| B-A    | 0.00    | 0.00          | 0.0             | A       |
| C-AB   | 0.00    | 0.00          | 0.0             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 16:45 - 17:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|--------|-----------------------|----------------------------|-------------------|-------|---------------------|-----------------|-----------|-------------------------------|
| B-C    | 0                     | 0.00                       | 559               | 0.000 | 0                   | 0.0             | 0.000     | A                             |
| B-A    | 0                     | 0.00                       | 379               | 0.000 | 0                   | 0.0             | 0.000     | A                             |

# 2027 | Base | AM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 1.03               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 1.03              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D3 | 2027 | Base     | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 711                     | 100.000            |
| B   |            | ✓            | 79                      | 100.000            |
| C   |            | ✓            | 1059                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To   |    |     |
|------|---|------|----|-----|
|      |   | A    | B  | C   |
| From | A | 0    | 38 | 673 |
|      | B | 69   | 0  | 10  |
|      | C | 1048 | 11 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

# Results

## Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.03    | 8.97          | 0.0             | A       |
| B-A    | 0.33    | 23.03         | 0.5             | C       |
| C-AB   | 0.07    | 3.53          | 0.1             | A       |
| C-A    |         |               |                 |         |

# 2027 | Base | PM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.90               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.90              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D4 | 2027 | Base     | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 897                     | 100.000            |
| B   |            | ✓            | 79                      | 100.000            |
| C   |            | ✓            | 469                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |    |     |
|------|---|-----|----|-----|
|      |   | A   | B  | C   |
| From | A | 0   | 92 | 805 |
|      | B | 59  | 0  | 20  |
|      | C | 455 | 14 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.05    | 9.32          | 0.1             | A       |
| B-A    | 0.22    | 15.96         | 0.3             | C       |
| C-AB   | 0.05    | 5.15          | 0.1             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 16:45 - 17:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|--------|-----------------------|----------------------------|-------------------|-------|---------------------|-----------------|-----------|-------------------------------|

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 1.12               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 1.12              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D5 | 2027 | Base+Dev | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 766                     | 100.000            |
| B   |            | ✓            | 79                      | 100.000            |
| C   |            | ✓            | 1072                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To   |    |     |
|------|---|------|----|-----|
|      |   | A    | B  | C   |
| From | A | 0    | 38 | 728 |
|      | B | 69   | 0  | 10  |
|      | C | 1061 | 11 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.03    | 9.42          | 0.0             | A       |
| B-A    | 0.36    | 26.28         | 0.5             | D       |
| C-AB   | 0.08    | 3.53          | 0.1             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 07:45 - 08:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |

# 2027 | Base+Dev | PM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 0.92               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 0.92              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D6 | 2027 | Base+Dev | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 926                     | 100.000            |
| B   |            | ✓            | 79                      | 100.000            |
| C   |            | ✓            | 558                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |    |     |
|------|---|-----|----|-----|
|      |   | A   | B  | C   |
| From | A | 0   | 92 | 834 |
|      | B | 59  | 0  | 20  |
|      | C | 544 | 14 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.06    | 9.58          | 0.1             | A       |
| B-A    | 0.25    | 17.99         | 0.3             | C       |
| C-AB   | 0.06    | 4.87          | 0.1             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 16:45 - 17:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |

# 2032 | Base | AM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 3.90               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 3.90              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D7 | 2032 | Base     | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 749                     | 100.000            |
| B   |            | ✓            | 158                     | 100.000            |
| C   |            | ✓            | 1073                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To   |    |     |
|------|---|------|----|-----|
|      |   | A    | B  | C   |
| From | A | 0    | 75 | 674 |
|      | B | 138  | 0  | 20  |
|      | C | 1051 | 22 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

# Results

## Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.08    | 14.82         | 0.1             | B       |
| B-A    | 0.69    | 50.32         | 2.0             | F       |
| C-AB   | 0.15    | 3.65          | 0.4             | A       |

# 2032 | Base | PM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 2.30               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.30              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D8 | 2032 | Base     | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 992                     | 100.000            |
| B   |            | ✓            | 157                     | 100.000            |
| C   |            | ✓            | 482                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |     |     |
|------|---|-----|-----|-----|
|      |   | A   | B   | C   |
| From | A | 0   | 183 | 809 |
|      | B | 117 | 0   | 40  |
|      | C | 455 | 27  | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.13    | 11.82         | 0.1             | B       |
| B-A    | 0.47    | 25.04         | 0.9             | D       |
| C-AB   | 0.11    | 5.40          | 0.2             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 16:45 - 17:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|--------|-----------------------|----------------------------|-------------------|-------|---------------------|-----------------|-----------|-------------------------------|

# 2032 | Base+Dev | AM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 4.98               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 4.98              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D9 | 2032 | Base+Dev | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 804                     | 100.000            |
| B   |            | ✓            | 158                     | 100.000            |
| C   |            | ✓            | 1086                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To   |    |     |
|------|---|------|----|-----|
|      |   | A    | B  | C   |
| From | A | 0    | 75 | 729 |
|      | B | 138  | 0  | 20  |
|      | C | 1064 | 22 | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

# Results

## Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.11    | 19.67         | 0.1             | C       |
| B-A    | 0.75    | 67.32         | 2.6             | F       |
| C-AB   | 0.16    | 3.65          | 0.5             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

## Main Results for each time segment

### 07:45 - 08:00

# 2032 | Base+Dev | PM

## Data Errors and Warnings

| Severity | Area                          | Item                       | Description   |
|----------|-------------------------------|----------------------------|---|
| Warning  | Minor arm visibility to right | Arm B - Minor arm geometry | Visibility to right expected to have two components if the arm has two lanes, or two lanes in a flared section. |

## Junction Network

### Junctions

| Junction | Name     | Junction type | Arm A Direction | Arm B Direction | Arm C Direction | Use circulating lanes | Junction Delay (s) | Junction LOS |
|----------|----------|---------------|-----------------|-----------------|-----------------|-----------------------|--------------------|--------------|
| 1        | untitled | T-Junction    | Two-way         | Two-way         | Two-way         |                       | 2.54               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 2.54              | A           |

## Traffic Demand

### Demand Set Details

| ID  | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|-----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D10 | 2032 | Base+Dev | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| A   |            | ✓            | 1021                    | 100.000            |
| B   |            | ✓            | 157                     | 100.000            |
| C   |            | ✓            | 571                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |     |     |
|------|---|-----|-----|-----|
|      |   | A   | B   | C   |
| From | A | 0   | 183 | 838 |
|      | B | 117 | 0   | 40  |
|      | C | 544 | 27  | 0   |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |
|------|---|----|---|---|
|      |   | A  | B | C |
| From | A | 0  | 0 | 3 |
|      | B | 0  | 0 | 0 |
|      | C | 3  | 0 | 0 |

## Results

### Results Summary for whole modelled period

| Stream | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|--------|---------|---------------|-----------------|---------|
| B-C    | 0.13    | 12.73         | 0.2             | B       |
| B-A    | 0.52    | 30.38         | 1.1             | D       |
| C-AB   | 0.12    | 5.10          | 0.3             | A       |
| C-A    |         |               |                 |         |
| A-B    |         |               |                 |         |
| A-C    |         |               |                 |         |

### Main Results for each time segment

#### 16:45 - 17:00

| Stream | Total Demand (PCU/hr) | Pedestrian demand (Ped/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |

There are warnings associated with one or more model runs - see the 'Data Errors and Warnings' tables for each Analysis or Demand Set.

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

### File summary

#### File Description

## Analysis Set Details

| ID | Network flow scaling factor (%) |
|----|---------------------------------|
| A1 | 100.000                         |

# 2025 | | AM

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 5.93               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 5.93              | A           |

## Arms

### Arms

| Arm | Name       | Description | No give-way line |
|-----|------------|-------------|------------------|
| B   | Morrisons  |             |                  |
| C   | Llys Deri  |             |                  |
| D   | A484 South |             |                  |
| A   | A484 North |             |                  |

### Roundabout Geometry

| Arm | V - Approach road half-width (m) | E - Entry width (m) | I' - Effective flare length (m) | R - Entry radius (m) | D - Inscribed circle diameter (m) | PHI - Conflict (entry) angle (deg) | Entry only | Exit only |
|-----|----------------------------------|---------------------|---------------------------------|----------------------|-----------------------------------|------------------------------------|------------|-----------|
| B   | 7.34                             | 7.34                | 0.0                             | 12.5                 | 55.0                              | 34.9                               |            |           |
| C   | 3.47                             | 7.03                | 3.3                             | 14.6                 | 55.0                              | 64.8                               |            |           |
| D   | 3.73                             | 7.20                | 15.2                            | 56.6                 | 55.0                              | 25.1                               |            |           |
| A   | 4.21                             | 7.00                | 32.9                            | 53.1                 | 55.0                              | 37.3                               |            |           |

### Slope / Intercept / Capacity

#### Roundabout Slope and Intercept used in model

| Arm | Final slope | Final intercept (PCU/hr) |
|-----|-------------|--------------------------|
| B   | 0.648       | 2121                     |
| C   | 0.440       | 1114                     |
| D   | 0.620       | 1822                     |
| A   | 0.631       | 1951                     |

*The slope and intercept shown above include any corrections and adjustments.*

## Traffic Demand

### Demand Set Details

| ID | Year | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D1 | 2025 | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| B   |            | ✓            | 250                     | 100.000            |
| C   |            | ✓            | 39                      | 100.000            |
| D   |            | ✓            | 1018                    | 100.000            |
| A   |            | ✓            | 1032                    | 100.000            |

### Origin-Destination Data

#### Demand (PCU/hr)

|      |   | To  |    |     |     |
|------|---|-----|----|-----|-----|
|      |   | B   | C  | D   | A   |
| From | B | 0   | 13 | 63  | 174 |
|      | C | 3   | 0  | 7   | 29  |
|      | D | 110 | 22 | 0   | 886 |
|      | A | 216 | 83 | 602 | 131 |

### Vehicle Mix

#### Heavy Vehicle %

|      |   | To |   |   |   |
|------|---|----|---|---|---|
|      |   | B  | C | D | A |
| From | B | 0  | 0 | 0 | 0 |
|      | C | 0  | 0 | 0 | 0 |
|      | D | 0  | 0 | 0 | 0 |
|      | A | 0  | 0 | 0 | 0 |

### Results

#### Results Summary for whole modelled period

| Arm | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|-----|---------|---------------|-----------------|---------|
| B   | 0.18    | 2.88          | 0.2             | A       |
| C   | 0.07    | 5.98          | 0.1             | A       |
| D   | 0.70    | 7.63          | 2.3             | A       |
| A   | 0.61    | 5.00          | 1.6             | A       |

#### Main Results for each time segment

##### 07:45 - 08:00

| Arm | Total Demand (PCU/hr) | Circulating flow (PCU/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|-----|-----------------------|---------------------------|-------------------|-------|---------------------|-----------------|-----------|-------------------------------|
| B   | 188                   | 629                       | 1714              | 0.110 | 188                 | 0.1             | 2.359     | A                             |
| C   | 29                    | 728                       | 794               | 0.037 | 29                  | 0.0             | 4.705     | A                             |
| D   | 766                   | 253                       | 1665              | 0.460 | 763                 | 0.8             | 3.975     | A                             |
| A   | 777                   | 101                       | 1887              | 0.412 | 774                 | 0.7             | 3.228     | A                             |

## 08:00 - 08:15

| Arm | Total Demand (PCU/hr) | Circulating flow (PCU/hr) | Capacity (PCU/hr) | RFC   | Throughput (PCU/hr) | End queue (PCU) | Delay (s) | Unsignalised level of service |
|-----|-----------------------|---------------------------|-------------------|-------|---------------------|-----------------|-----------|-------------------------------|

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 5.34               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 5.34              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D2 | 2025 | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| B   |            | ✓            | 377                     | 100.000            |

# 2027 | Base | PM

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 6.19               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 6.19              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D4 | 2027 | Base     | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| B   |            | ✓            | 392                     | 100.000            |
| C   |            | ✓            | 156                     | 100.000            |
| D   |            | ✓            | 536                     | 100.000            |
| A   |            | ✓            | 1252                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |    |     |     |
|------|---|-----|----|-----|-----|
|      |   | B   | C  | D   | A   |
| From | B | 2   | 12 | 145 | 233 |
|      | C | 14  | 1  | 28  | 113 |
|      | D | 66  | 9  | 5   | 456 |
|      | A | 267 | 61 | 720 | 204 |

## Vehicle Mix

**Heavy Vehicle %**

|      |   | To |   |   |   |
|------|---|----|---|---|---|
|      |   | B  | C | D | A |
| From | B | 0  | 0 | 0 | 0 |
|      | C | 0  | 0 | 0 | 0 |
|      | D | 0  | 0 | 0 | 0 |
|      | A | 0  | 0 | 0 | 0 |

**Results**

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 7.28               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 7.28              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario   | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|------------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D5 | 2027 | Base + Dev | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| B   |            | ✓            | 255                     | 100.000            |
| C   |            | ✓            | 45                      | 100.000            |
| D   |            | ✓            | 1104                    | 100.000            |
| A   |            | ✓            | 1132                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |    |     |     |
|------|---|-----|----|-----|-----|
|      |   | B   | C  | D   | A   |
| From | B | 0   | 14 | 67  | 174 |
|      | C | 3   | 0  | 9   | 33  |
|      | D | 118 | 27 | 0   | 959 |
|      | A | 216 | 94 | 691 | 131 |

## Vehicle Mix

**Heavy Vehicle %**

|      |   | To |   |   |   |
|------|---|----|---|---|---|
| From |   | B  | C | D | A |
|      | B | 0  | 0 | 0 | 0 |
|      | C | 0  | 0 | 0 | 0 |
|      | D | 0  | 0 | 0 | 0 |
|      | A | 0  | 0 | 0 | 0 |

**Results**

**Results Summary for whole modelled period**

| Arm | Max RFC | Max Delay (s) | Max Queue (PCU) | Max LOS |
|-----|---------|---------------|-----------------|---------|
| B   | 0.19    | 3.08          | 0.2             | A       |
| C   | 0.08    | 6.54          | 0.1             | A       |
| D   | 0.76    | 9.60          | 3.2             | A       |
| A   | 0.67    | 5.98          | 2.1             | A       |

**Main Results for each time segment**

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 6.57               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 6.57              | A           |

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 7.34               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 7.34              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D8 | 2032 | Base     | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

## Data Errors and Warnings

| Severity | Area        | Item                        | Description  |
|----------|-------------|-----------------------------|--|
| Warning  | Geometry    | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution.   |
| Warning  | Vehicle Mix |                             | HV% is zero for all movements / time segments. Vehicle Mix matrix should be completed whether working in PCUs or Vehs. If HV% at the junction is genuinely zero, please ignore this warning. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 8.74               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 8.74              | A           |

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario   | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|------------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D9 | 2032 | Base + Dev | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |

# 2032 | Base + Dev | PM

## Data Errors and Warnings

| Severity | Area     | Item                        | Description  |
|----------|----------|-----------------------------|--|
| Warning  | Geometry | Arm A - Roundabout Geometry | Effective flare length is over 30m, which is outside the normal range. Treat capacities with increasing caution. |

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order  | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | B, C, D, A | 8.08               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 8.08              | A           |

## Traffic Demand

### Demand Set Details

| ID  | Year | Scenario   | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|-----|------|------------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D10 | 2032 | Base + Dev | PM          | ONE HOUR             | 16:45              | 18:15               | 15                        |

### Demand overview (Traffic)

| Arm | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-----|------------|--------------|-------------------------|--------------------|
| B   |            | ✓            | 407                     | 100.000            |
| C   |            | ✓            | 175                     | 100.000            |
| D   |            | ✓            | 683                     | 100.000            |
| A   |            | ✓            | 1355                    | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |   | To  |    |     |     |
|------|---|-----|----|-----|-----|
|      |   | B   | C  | D   | A   |
| From | B | 2   | 12 | 160 | 233 |
|      | C | 14  | 1  | 34  | 126 |
|      | D | 73  | 10 | 5   | 595 |
|      | A | 267 | 61 | 823 | 204 |

## Vehicle Mix

### Heavy Vehicle %

|      |   | To |   |   |   |
|------|---|----|---|---|---|
|      |   | B  | C | D | A |
| From | B | 0  | 0 | 0 | 3 |

| D N - North              |        | 1.2         | 5.37      | 0.54 | A   |        | 1.6         | 6.19      | 0.62 | A   |

Values shown are the highest values encountered over all time segments. Delay is the maximum value of average delay per arriving vehicle.

## File summary

### File Description

|             |                      |
|-------------|----------------------|
| Title       |                      |
| Location    |                      |
| Site number |                      |
| Date        | 09/04/2025           |
| Version     |                      |
| Status      | (new file)           |
| Identifier  |                      |
| Client      |                      |
| Jobnumber   |                      |
| Enumerator  | AzureAD\AndrewHughes |
| Description |                      |

## Units

| Distance units | Speed units | Traffic units input | Traffic units results | Flow units | Average delay units | Total delay units | Rate of delay units |
|----------------|-------------|---------------------|-----------------------|------------|---------------------|-------------------|---------------------|
| m              | kph         | PCU                 | PCU                   | perHour    | s                   | -Min              | perMin              |

## Analysis Options

| Calculate Queue Percentiles | Calculate residual capacity | RFC Threshold | Average Delay threshold (s) | Queue threshold (PCU) |
|-----------------------------|-----------------------------|---------------|-----------------------------|-----------------------|
|                             |                             | 0.85          | 36.00                       | 20.00                 |

## Demand Set Summary

## Analysis Set Details

| ID | Network flow scaling factor (%) |
|----|---------------------------------|
| A1 | 100.000                         |

# 2025 | Observed | AM

## Data Errors and Warnings

No errors or warnings

## Junction Network

### Junctions

| Junction | Name     | Junction type       | Use circulating lanes | Arm order          | Junction Delay (s) | Junction LOS |
|----------|----------|---------------------|-----------------------|--------------------|--------------------|--------------|
| 1        | untitled | Standard Roundabout |                       | A E, B S, C W, D N | 4.37               | A            |

### Junction Network

| Driving side | Lighting       | Network delay (s) | Network LOS |
|--------------|----------------|-------------------|-------------|
| Left         | Normal/unknown | 4.37              | A           |

## Arms

### Arms

| Arm | Name  | Description | No give-way line |
|-----|-------|-------------|------------------|
| A E | East  |             |                  |
| B S | South |             |                  |
| C W | West  |             |                  |
| D N | North |             |                  |

### Roundabout Geometry

| Arm         | V - Approach road half-width (m) | E - Entry width (m) | I' - Effective flare length (m) | R - Entry radius (m) | D - Inscribed circle diameter (m) | PHI - Conflict (entry) angle (deg) | Entry only | Exit only |
|-------------|----------------------------------|---------------------|---------------------------------|----------------------|-----------------------------------|------------------------------------|------------|-----------|
| A E - East  | 3.51                             | 6.13                | 21.9                            | 38.7                 | 50.0                              | 20.7                               |            |           |
| B S - South | 4.10                             | 7.25                | 14.0                            | 76.5                 | 50.0                              | 13.2                               |            |           |
| C W - West  | 3.52                             | 8.03                | 15.8                            | 53.7                 | 50.0                              | 17.2                               |            |           |
| D N - North | 3.26                             | 6.24                | 15.4                            | 22.4                 | 50.0                              | 31.3                               |            |           |

### Slope / Intercept / Capacity

#### Roundabout Slope and Intercept used in model

| Arm         | Final slope | Final intercept (PCU/hr) |
|-------------|-------------|--------------------------|
| A E - East  | 0.630       | 1729                     |
| B S - South | 0.686       | 1967                     |
| C W - West  | 0.671       | 1914                     |
| D N - North | 0.580       | 1547                     |

The slope and intercept shown above include any corrections and adjustments.

## Traffic Demand

### Demand Set Details

| ID | Year | Scenario | Time period | Traffic profile type | Start time (HH:mm) | Finish time (HH:mm) | Time segment length (min) |
|----|------|----------|-------------|----------------------|--------------------|---------------------|---------------------------|
| D1 | 2025 | Observed | AM          | ONE HOUR             | 07:45              | 09:15               | 15                        |

### Demand overview (Traffic)

| Arm         | Linked arm | Use O-D data | Average Demand (PCU/hr) | Scaling Factor (%) |
|-------------|------------|--------------|-------------------------|--------------------|
| A E - East  |            | ✓            | 40                      | 100.000            |
| B S - South |            | ✓            | 836                     | 100.000            |
| C W - West  |            | ✓            | 285                     | 100.000            |
| D N - North |            | ✓            | 660                     | 100.000            |

## Origin-Destination Data

### Demand (PCU/hr)

|      |             | To         |             |            |             |
|------|-------------|------------|-------------|------------|-------------|
|      |             | A E - East | B S - South | C W - West | D N - North |
| From | A E - East  | 0          | 4           | 1          | 35          |
|      | B S - South | 20         | 0           | 54         | 762         |
|      | C W - West  | 3          | 38          | 0          | 244         |
|      | D N - North | 70         | 320         | 266        | 4           |

## Vehicle Mix

### Heavy Vehicle %

|      |             | To         |             |            |             |
|------|-------------|------------|-------------|------------|-------------|
